

REMARKS

The present application is a continuation of application 09/926,711. By the time the Examiner looks at the present case the parent case should be allowed. In the parent case Applicant limited the claims to subject matter that was indicated to be allowable over the prior art. In the present case the claims have been directed to a temperature range (15-20°C) not allowed in the parent (in the parent case the temperature range allowed was 20-35 °C). Note, e.g., page 2 of the specification and the original claims for support. Attached hereto are the 1449s and 892s from the parent case for consideration and printing on the face of the patent.

In view of the above Applicant submits that the present application is in condition for examination on the merits, and early notification thereof is earnestly solicited.

Respectfully submitted,

OBLON, SPIVAK, McCLELLAND,  
MAIER & NEUSTADT, P.C.
